

AMENDMENTS TO THE SPECIFICATION

Please amend the paragraph that begins on page 14, line 13, as follows:

Note that, if the hole diameter of the through hole 2 at the surface 1A of the pressure sensitive adhesive sheet 1 is 40 μm or less, the hole itself of the through hole 2 (internal space of the through hole 2) can be invisible to the naked eye. Therefore, in case it is particularly required that the hole itself of the through hole 2 is not invisible on the appearance of the pressure sensitive adhesive sheet 1, it is preferable that the upper limit of the hole diameter of the through hole 2 at the surface 1A of the pressure sensitive adhesive sheet 1 is 40 μm . In this case, when the base material 11 is transparent in particular, since the hole diameter ~~at the internal of~~ in the base material 11 and the pressure sensitive adhesive layer 12 as well as at the surface 1A of the pressure sensitive adhesive sheet 1 can influence the visibility of the hole, it is preferable that the upper limit of the hole diameter of the through hole 2 ~~at the internal of~~ in the base material 11 and the pressure sensitive adhesive layer 12 is particularly 60 μm .
